## Storage Heater Information

Some electric storage heaters, generally those manufactured before 1975, contain asbestos. Your local Electricity Board keeps an up to date list of heaters, which have been identified as containing asbestos. Do not dismantle the storage heater to check whether or not this is the case! Generally, the heaters are perfectly safe as long as they are not tampered with. If you wish to have the heaters removed, this must be done by licensed contractors.

Retain Limited has sourced this information through the internet and upon advice from manufacturers; we are providing you with this information as a guide. For confirmation of asbestos content seek advice from the manufacturer or dispose of treating the heater as asbestos containing.

Should you require any further advice or would like your storage heater removed then call us on 0800 027 2244.

Tel: 0800 027 2244
